Callback - the building block for asynchronism

```
fs.readFile(filepath, 'utf8', function (err, data) {
    if (err) console.log(err);
    else console.log(data);
});
```

Defining a promise

```
const readFile = function(filepath){
    return new Promise(function(resolve, reject){
        fs.readFile(filepath, 'utf8', function (err, data) {
            if (err) return reject(err);
            return resolve(data);
        });
   });
```
