Callback - the building block for asynchronism

```
fs.readFile(filepath, 'utf8', function (err, data) {
        if (err) console.log(err);
        else console.log(data);
});
```

Defining a promise

```
const readFile = function(filepath){

    return new Promise(function(resolve, reject){

        fs.readFile(filepath, 'utf8', function (err, data) {
            if (err) return reject(err);
            return resolve(data);
        });

    });

}
```
