Defining a promise

```
const readFile = function(filepath){

    return new Promise(function(resolve, reject){

        fs.readFile(filepath, 'utf8', function (err, data) {
            if (err) return reject(err);
            return resolve(data);
        });

    });

}
```

Calling a promise

```
readFile(filepath)
    .then(function(data){
        console.log(data);
    })
    .catch(function(err){
        console.log(data);
    });
```
