Calling a promise

```
readFile(filepath)
    .then(function(data){
        console.log(data);
    })
    .catch(function(err){
        console.log(data);
    });
```

Microtasks vs Macrotasks in the Event Loop

- **Microtasks** (like Promise `.then()` callbacks)
  have higher priority than macrostaks

- **Macrotasks**
  (like setTimeout(), I/O operations, and DOM events)
  are processed only after the microtask queue is empty
