How to improve response time on the backend?

Processing the request means:

1. Parse the HTTP request

2. Map the URL to the handler

3. Query the database or third-party API

4. Compute the HTTP response

DB and API accesses are expensive (in time but also money when your host charges you each access)

Fine-grained caching with the web application

Cache controlled by the program

- ◉ Specific for each app
- ✓ Good for caching database requests and storing sessions
- ➡ Popular memory cache : *Memcached / Redis*
